EDUCATION

University of Waterloo

Bachelor of Applied Science in Computer Engineering — GPA: 3.9/4.0

Waterloo, Ontario

Expected: April 2028

TECHNICAL SKILLS

Languages: Python, JavaScript, Typescript, ClojureScript, HTML, CSS, C++, SQL

Developer Tools: DataDog, Chromatic, Amplitude, Figma, Vercel, TestComplete, Azure (AZ-900 & AI-900), GCP

Libraries/Frameworks: React.js, Express.js, TanStack, Re-frame, Tailwind, OpenCV, Axios, Mongoose, Flask, Rasa

EXPERIENCE

Frontend Engineer

Jan. 2026 – Apr. 2026

Composer by SoFi

Toronto, ON

- Addressed strategy creation and portfolio monitoring requests from **100% of interviewed users** on a **\$100M+ ADTV** trading platform by building components for conditional logic, advanced charting, and trading workflows.
- Modernized **7+ core app surfaces** by migrating legacy **CLJS/Re-frame** views to **TS/React**, across portfolio, strategy editor, backtesting, factsheet, and **TradingView** charting components.
- Reduced frontend tech debt by replacing legacy API and search patterns with **TanStack Query** and **React InstantSearch**, improving data-fetching consistency, caching, and search maintainability across existing services.
- Improved account security and brokerage security compliance standards by rolling out **MFA** and **session-expiry workflows** to **100% of users** using existing **Footprint** onboarding infrastructure and **Twilio** verification.

Software Developer/QA

May 2025 – Aug. 2025

Rocscience

Toronto, ON

- Developed a **Rasa automation chatbot** that converted natural-language into **WPF UI actions**, using **OCR** and **Microsoft UI Automation** to map text labels to editable controls across **95%** of application controls.
- Engineered **fault-tolerant automation processes** for reliable execution across **3 WPF applications** through combining fuzzy matching algorithms, script recovery, performance reports, and context-aware UI caching.

Software Developer/QA

Sept. 2024 – Dec. 2024

Rocscience

Toronto, ON

- Enhanced OCR performance, resulting in an average of **96% confidence** in recognized text, by applying an **OpenCV-driven image pre-processing pipeline** including resizing, thresholding, grayscale, and denoising.
- Automated batch result file comparison, **making reviews 5x faster** by preprocessing files with **regex**, comparing outputs with **difflib**, and exporting structured results to Excel using **pandas**.

Healthy Lifestyle Chatbot Developer

Jan. 2024 – April 2024

WE Accelerate Program - Microsoft Azure & Artificial Intelligence

Waterloo, ON

- Designed an end-to-end health **chatbot pipeline with GPT-3.5**, training data collection, feature engineering, fine-tuning workflows, and Azure Container Instances to generate personalized recommendations.

PROJECTS

GitHired | React, Python, Flask, MongoDB, Next.js

June 2025

- Built a GitHub-based screening tool with **15+ RESTful endpoints**, enabling automated **GitHub profile analysis**, resume parsing, and **candidate relevancy ranking**, thus reducing screening time significantly.
- Integrated **Gemini 2.5 Pro** for candidate-job matching by analyzing repositories against job requirements, allowing for accurate candidate matching through topic correlation, code pattern complexity, and documentation quality.

UW Exam Schedule Exporter | React, TS, Python, Flask, Pandas, MongoDB

Feb. 2024 – March 2024

- Engineered a Chrome extension using **React, TypeScript, and Python** to create server-side features and a polished UI, allowing UWaterloo students to automatically export their exam schedule via a .ics file.

Diskovery - Spotify Music Recommender | React, Node.js, Express.js, MongoDB

Jan. 2024 – Feb. 2024

- Enabled client-server communication and CRUD operations on a **MongoDB database** through **22 endpoints** by leveraging **Express.js, Axios, and Spotify's Web API** to create a **REST API**.
- Facilitated secure storage of user data by integrating **Passport.js** with **Google OAuth 2.0** for authentication.
